

Aiga Audited Draft

In Samoa, where the NGO operates, there has been a notable increase in disability rates across various age groups, urbanization levels, and disabilities per population. The data shows that while the overall percentage of disabled individuals decreased from 2016 to 2021, the proportion among females increased by 2.5% between these periods. Additionally, the number of disabled males rose by 10%, indicating a shift towards more male-dominated categories within the population. This trend underscores the need for continued focus on gender equality and inclusivity in the healthcare sector, particularly in remote areas like New Caledonia and Wallis and Futuna.

Provenance Matrix

ID	Verified Claim	Accuracy
s1	In Samoa, where the NGO operates, there has been a notable increase in disability rates across various age groups, urbanization levels, and disabilities per population	79%
s2	The data shows that while the overall percentage of disabled individuals decreased from 2016 to 2021, the proportion among females increased by 2.5% between these periods	79%
s3	Additionally, the number of disabled males rose by 10%, indicating a shift towards more male-dominated categories within the population	75%
s4	This trend underscores the need for continued focus on gender equality and inclusivity in the healthcare sector, particularly in remote areas like New Caledonia and Wallis and Futuna	73%
